Tax Expenditure Report1998

To the People of Illinois:

Since 1992, state agencies have been required by law to report to the Comptroller on the impact of tax expenditures. The Tax Expenditure Report, published annually, is an outgrowth of that statutory requirement. While we are proud of the five reports produced during this administration, I regret that we are still unable to define the impact of the State's \$4.1 billion in tax expenditures upon their intended beneficiaries.

Attempts have been made through the legislative process to provide this office with the information needed to perform meaningful analysis on the impact of tax expenditures. Unfortunately, these initiatives have met with limited success, and the Tax Expenditure Report remains essentially a listing of the various tax expenditures offered by state government.

Given the resources available, we have provided — and will provide in this report — a great deal of information on tax expenditures in Illinois. This year, we include a special study on tax incentives for business. We look at the history of tax incentives, including detail on who benefits from Illinois' \$319 million in business tax incentives.

The majority of tax expenditures grew out of the lean years of the 1980's, when Illinois and other midwestern states suffered from depressed economies. Although our state finances have shown marked improvement in the past decade, the tax expenditure structure remains virtually unchanged.

Current reporting requirements do not provide the information necessary to determine if our tax incentives are effective in today's economy and workplace. If the State of Illinois was a business, the lack of accountability imposed on the \$4.1 billion in tax expenditures would be inconceivable. It is my express wish that in the future, this significant facet of state finance receives the study and analysis it deserves.

Sincerely,

Loleta Didrickson Comptroller

Toleta Didieshoon

WHAT IS A TAX EXPENDITURE?

A tax expenditure is any exemption, exclusion, deduction, allowance, credit, preferential tax rate, abatement, or other device that reduces the amount of tax revenue that would otherwise accrue to the State. Tax expenditures are used to provide a means of benefiting "selected" groups or providing an incentive for the performance of desired activities. Numerous tax expenditures have been implemented over the years benefiting individuals and business.

The total impact of tax expenditures in Illinois (as reported by state agencies) was estimated at \$4.1 billion in fiscal 1998, with the major portion derived from income and sales tax expenditures.

Expenditures have been used since the early 1930's, however it was the decade of the 1980's that saw an explosive growth in their use. During that decade, 83 tax expenditures were

enacted. Of these, at least 34 were related to economic development efforts.

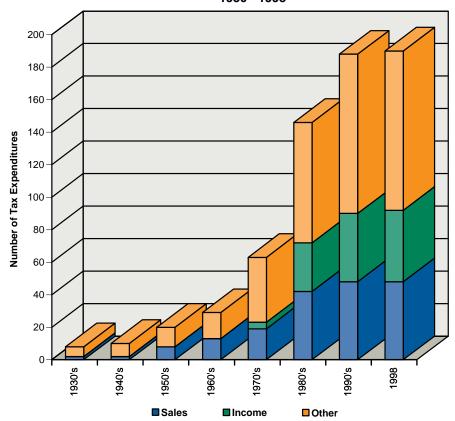

For fiscal 1998, agencies identified 191 tax expenditures, 146 were associated with taxes and 45 with licenses or fees.

SPECIAL STUDY - TAX INCENTIVES FOR BUSINESS

Many Illinois tax expenditures have been enacted that are intended to improve the state's business climate. Advocates of business tax incentives have argued that:

- they are targeted in such a strategic manner that the new economic activity they attract to Illinois will be well worth their costs:
- the reduced costs from lower taxes will increase the competitiveness of new and existing Illinois businesses;
 - they are designed to increase desirable economic activities such as business formations in economically depressed parts of the state, spending on job training, increase employment, or encourage research expenditures;
 - they will serve as a signal that Illinois is serious about reducing the cost of business in the state;
 - every state that Illinois competes with provides the tax incentive so not having it in Illinois will be a sign that Illinois is an anti-business state.

Number of Tax Expenditures in Effect 1930 - 1998

Although business tax incentives have been part of the Illinois tax code since 1979, almost nothing is known about their impact on jobs and new investment. This study uses data gathered by the tax expenditure survey to examine how much tax incentives cost in fiscal year 1998, separate the benefits between those that reduced equipment costs versus those that reduced labor and research costs, and trace the timing of their imposition.

Illinois Business Tax Incentives in Fiscal Year 1998

In fiscal year 1998, \$319 million in tax expenditures were classified as business incentives designed to improve the Illinois business climate. The eight largest accounted for \$276 million or 87% of the total cost of Illinois tax incentives.

The sales tax exemption for manufacturing and assembling machinery and equipment is by far the most expensive Illinois business incentive. Begun as a partial exemption of these sales in 1979, this exemption reduced state revenues by \$122 million in fiscal year 1998. The two other sales tax incentives with costs in excess of \$10 million both are enterprise zone benefits. The building material exemption, effective in 1982, exempts the sale of building materials for remodeling or construction in an enterprise zone. This incentive cost \$11 million in fiscal year 1998. In 1985, all purchases of merchandise for use by enterprise zone businesses designated as high impact by DCCA became exempt. The cost of this exemption was \$28 million in fiscal year 1998.

The most expensive corporate income tax incentive (2nd most expensive overall) was the

				Cost

Total			\$	319,092

Includes enterprise zone and foreign trade zone dividend and job training incentives, as well as non-incentive subtractions such as interest expenses, acceleration of life insurance benefits for a terminal illness, Persian Gulf War bonuses, medical care savings accounts, and self-employed health insurance subtractions.

Includes enterprise zone, high impact business investment, jobs and training, and environmental remediation incentives as well as the dependent care credit.

research and development credit. This credit is 6.5% of qualifying expenditures, as defined in the Internal Revenue Code, for increasing research activities in Illinois. The credit went into effect in fiscal year 1991 and had a \$35 million cost in fiscal year 1998. The training expense credit, effective in fiscal year 1987, is provided to taxpayers that pay for educational or vocational training on behalf of Illinois residents or employees. The credit is 1.6% of training expenses and went into effect in 1987. Its cost is \$18 million in fiscal year 1998.

Another enterprise zone exemption, effective in 1986, is the electric utility tax exemption for sales to DCCA certified businesses. The cost of this exemption was \$24 million in fiscal year 1998. A second tax incentive that encourages the development of energy sources from waste sites is the credit to purchase electricity produced from methane gas that is generated from landfills. Effective in 1987, the incentive cost \$18 million in fiscal year 1998.

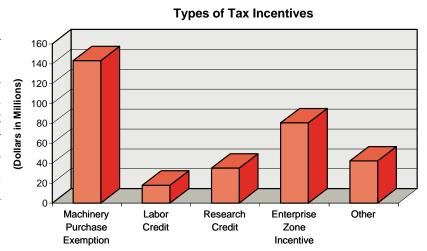

Most deductions applied against the corporate income tax are also applied against the income tax on individuals. Most of these subtractions are combined in the 'other subtractions' category in the Tax Expenditure report. The cost of these subtractions, which include the enterprise zone dividend, foreign trade zone dividend, and job training contribution subtractions, as well as several subtractions that are not business incentives, was \$21 million in fiscal year 1998.

Who Benefits from Illinois Business Tax Incentives

An examination of Illinois tax incentives indicated that four types of benefits are available. These include general exemptions for the purchase of machinery and other investment goods, credits reducing labor costs, credits encouraging research, and special benefits

geared to encourage development in enterprise zones and foreign trade zones and investments in businesses having a high economic impact in Illinois.

The largest portion of Illinois tax incentives reduce the cost of machinery purchases. In fiscal year 1998, these incentives accounted for \$143 million or 45% of the value of Illinois incentives. Besides the manufacturing and assembling machinery exemption, these include the coal, oil, and distillation machinery exemp-

tion at a cost of \$4 million, the graphic arts equipment exemption at a cost of \$6 million, and the pollution control facilities exemption at a cost of \$3 million. Effective in fiscal year 1995, manufacturers purchasing the machinery and equipment qualifying for the 100% sales tax exemption earn an additional tax credit to offset sales taxes on purchases of production related tangible personal property. In fiscal year 1998, this additional equipment incentive cost \$9 million. (In addition to these tax incentives that reduce state revenues, the investment tax credit charged against the personal property replacement tax reduced these grants to local governments by \$37 million for the 1996 tax year.)

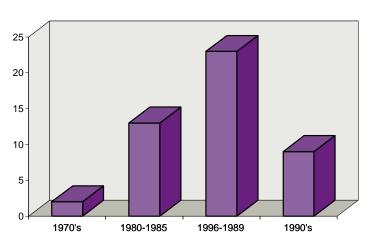

Special incentives are available for enterprise zones, high economic impact businesses, and federally designated foreign trade zones. These special incentives were intended to either help disadvantaged areas in Illinois that need special treatment to attract new business activity or for trade oriented businesses that have wide discretion in their location decision and would be sensitive to cost savings. Special incentives accounted for \$81 million or 25% of the value of Illinois tax incentives.

The cost of the other two categories of tax incentives, labor and research credits, were substantially less than the cost of machinery purchase and special incentives. Research credits of \$35 million accounted for 11% of the total cost of incentives, while labor credits of \$18 million accounted for 6%.

History of Illinois Tax Incentives

Only two of the 47 tax incentives identified in the Tax Expenditure report, the pollution control facilities and manufacturing and assembling machinery exemptions from the sales tax, date back to the 1970's. In contrast, over three-quarters (36) became effective in the 1980's.

Number of Tax Incentives by Effective Date

Local Government Incentives

The Department of Revenue also collects sales and corporate income taxes for payment to local governments. These include local government sales taxes that are in addition to the 5% state tax and the 2.5% personal property replacement corporate income tax. Tax exemptions and subtractions that reduce the state tax base will also reduce revenues for the associated taxes owed to local governments. The investment tax credit, charged against the corporate personal property replacement tax, is another incentive charged to revenues available for local governments.

In addition, local governments can provide business tax incentives by reducing property tax liabilities. The three incentives available are general authority tax abatements, enterprise zone abatements, and tax increment financing.

General authority abatements can be offered to a variety of businesses including recycling companies, horse racing and auto racing facilities, and property in urban decay areas. Units of local government have the authority to abate property taxes on business improvements added to enterprise zone real estate. The most recent complete Department of Revenue report (1995 tax year) lists the value of enterprise zone abatements at \$32 million and the value of general authority abatements at \$2.4 million.

Tax increment financing (TIF) districts do not reduce taxes, instead increases in tax revenues over the base are normally dedicated to paying for improvements in the TIF district. TIF extensions have grown rapidly since 1980 and totaled \$254 million for the 1996 tax year.

In the 1980's, the Illinois and Midwest economies suffered their most serious economic decline since the great depression. Double digit unemployment, combined with fears that the Midwest rust belt would never be able to recoup the jobs lost in their core heavy manufacturing industries, made policy makers desperate to find ways to attract new business to the region. The result was the emergence of tax incentives as a tool to rejuvenate the state's economy.

Illinois business incentives reflect a major emphasis on reducing the cost of business investment in machinery and equipment with much smaller portions reducing the costs of research and hiring new employees. This structure may just reflect how Illinois taxes business, with the main state business taxes consisting of the sales tax on business purchases and the corporate income tax. It also indicates an implicit state policy where tax incentives serve to encourage business investment in hardware with the expectation that the new and expanding businesses attracted by the incentives will

lead to job creation. On the other hand, a much smaller amount of state revenues are sacrificed to encourage research and development and no specific credit is available to encourage the use of venture capital in Illinois.

Although the Illinois economy has markedly improved during this decade, the portfolio of tax incentives developed during the 1980's remains largely unchanged. Meanwhile, Illinois has become more integrated into the global economy. This provides Illinois with great opportunities to provide products and services throughout the world, but also means that Illinois must be able to provide those items as economically as in competing regions.

Illinois workers and business leaders showed great flexibility in restructuring our economy after the problems of the 1980's. The key factors for continuing this economic success are a well trained labor force and creative, well-financed entrepreneurs. Does the current mix of investment oriented state business tax incentives help develop the skills needed to meet the new economic challenges that Illinois will certainly face in the future? This question cannot be properly answered until better information is available describing the businesses that benefit from tax incentives and how these incentives affect their operating decisions.

WHAT'S NEW IN FISCAL YEAR 1998

Environmental Remediation Tax Credit

The only new tax expenditure that became effective in fiscal year 1998 was the Environmental Remediation Tax Credit. The environmental remediation program is a program designed to encourage the clean up of environmentally damaged sites. One reason why new factories are often built on rural land (called greenfields) is to avoid the clean up

expenses and potential legal liabilities from acquiring a site with a pre-existing factory (called brownfields). Expansion into rural areas destroys good crop land and contributes to urban sprawl. The Illinois EPA site remediation program works to return abandoned brownfields to productive activity.

The Environmental Remediation Tax Credit provides an additional state financial incentive to clean brownfields. Effective for tax years beginning in January 1, 1998, an income tax credit is available for unreimbursed eligible remediation costs. The credit is 25% of unreimbursed costs for enterprise zones and low income areas. The 25% credit is available for costs in excess of \$100,000 for other areas. The credit cannot exceed \$40,000 per year with a maximum of \$150,000 per site. The EPA estimates that the credit will ultimately have an annual cost of \$3.5 million.

Restructuring of Taxes on Insurance Companies

Taxes on insurance companies are undergoing sweeping changes. The insurance privilege tax was a 2% tax on the premiums of companies based outside Illinois. In an October 1997 decision, the Illinois Supreme Court declared this tax unconstitutional. As a result, privilege tax receipts into the General Revenue Fund dropped from \$105 million in fiscal year 1997 to \$33 million in fiscal year 1998. Insurance companies either paid the privilege tax into the Protest Fund or paid the retaliatory tax which is the difference between the taxes and fees paid by an insurance company in Illinois and the taxes and fees a similar Illinois company would pay in that company's home state.

The confusion pertaining to insurance taxes during fiscal year 1998 made it impossible to identify the costs of the life and health guaranty assessment credits and replacement tax credits in this report. The fiscal year 1997 Tax Expenditure Report included \$62 million in tax

expenditures credited against insurance department taxes and fees including \$29 million in replacement tax credits, \$26 million in life and health guaranty assessments credits, and \$7 million in fire department tax credits. This report only lists the \$7 million fire department tax credit (a credit for a 2% tax on fire insurance premiums that is paid to fire protection districts and municipalities) as a Department of Insurance tax expenditure.

A new privilege tax was enacted May 29,1998. This tax corrects the constitutional issues identified in the Supreme Court ruling and provides for insurers to be taxed at a level which sustains past income to the state. The new tax rate is .5% of all premiums, except accident and health insurance and HMO's which are taxed at .4%. All revenue from this tax is deposited into the General Revenue Fund. More complete reports of the cost of insurance tax expenditures should resume in fiscal year 1999 with the processing of first year returns of the new tax.

Other Recent Tax Initiatives

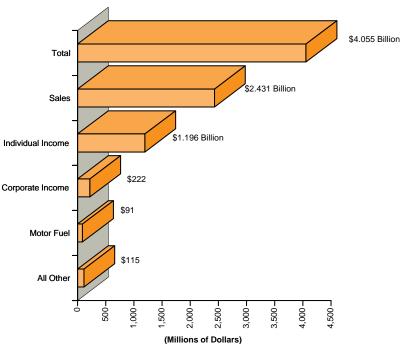

During fiscal year 1998, there were significant increases in cigarette, telecommunications, and riverboat gambling tax rates to provide additional state funds for education. These rate increases have little impact in this report since the value of tax expenditures from these three sources are rather small. The impact of other major tax initiatives, including the first increase in the standard income tax exemption since the initiation of the tax in 1970 and a complete restructuring of electric utility taxes in response to deregulation of this industry, will be reported in the fiscal year 1999 Tax Expenditure Report.

THE IMPACT OF TAX EXPENDITURES

Although tax expenditures were reported for 58 revenue sources in fiscal year 1998, the four

largest tax sources accounted for \$3.940 billion or 97% of the \$4.055 billion in reported tax expenditures. Well over half of the value of tax expenditures (\$2.431 billion or 60%) were attributed to state sales taxes.

Impact of Tax Expenditures

Another 35% was associated with income taxes divided \$1.196 billion or 30% from the individual income tax and \$222 million or 5% from the corporate income tax. The motor fuel tax accounted for \$91 million or 2% of reported tax expenditures leaving only \$115 million or 3% for tax expenditures from the remaining revenue sources.

The Tax Expenditure Report only identifies tax expenditures that reduce State revenues. When local taxes are piggy-backed onto state taxes, tax expenditures also reduce local government tax revenues. A prime example is sales tax monies reserved for local governments.

One prominent tax expenditure has been designed to exclusively impact local government revenues. The investment tax credit is applied against the personal property replacement income tax which is distributed to local governments. This tax expenditure includes a base 0.5% credit for buying equipment used in retailing, manufacturing, and mining. An additional 0.5% credit is allowed if the company's Illinois employment has increased by 1%. The cost to local governments for this tax expenditure for the 1996 tax year was \$36.8 million.

THE TEN LARGEST TAX EXPENDITURES - FISCAL YEAR 1998

Six of the ten largest tax expenditures were from the sales tax, with three from the individual income tax and one from the corporate tax. The food, drug, and medical appliance rate reduction was the largest single tax expenditure and represented 22% of the total reported impact. The impact of the ten largest tax expenditures totaled \$3.4 billion or 83% of the total impact of all tax expenditures.

(Millions of Dollars)

particular interest are the trends in growth for the four largest expenditures which have accounted for over half of the total reported.

Retirement subtractions from the Illinois individual income tax apply to all retirement income including disability, social security, and railroad retirement income that is subject to the federal income tax. The estimated cost of this tax

expenditure increased \$244 million or 85.9% from \$284 million in fiscal year 1993 to \$528 million for 1998. The growth in this expenditure reflects the increase in income that has become subject to the federal tax, such as the increase in the maximum percentage of federally taxable social security income from 50% to 85% effective for the 1994 tax year.

Demographers are projecting a sizable increase in Illinois' population over 65. A recently published fifty year population forecast by the U.S. Bureau of Economic Analysis estimates that there will be 3.2 million senior cit-

izens in Illinois in 2045, over 2.1 times the number of seniors (1.5 million) in 1998. Over that same period, the total Illinois population is projected to increase 33.5%. The result should be a continued rapid increase in the cost of the retirement income tax expenditure.

In contrast, the \$1,000 standard deduction from the state individual income tax has increased

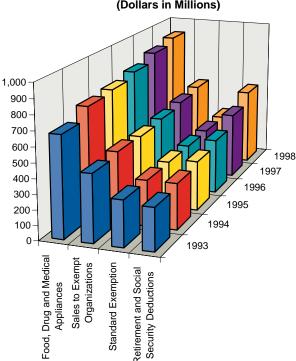

Amount	Expenditure	Applied Against
\$905	Food, Drugs, Medical Appliances	Sales Tax
536	Sales to Exempt Organizations	Sales Tax

88	Retailers' Discount	Sales Tax
\$3.366 Billion	Total Impact of Largest Ten Expenditures	
\$4.055 Billion	Total Impact of All Tax Expenditures	
83%	Percent of Total Impact	

THE FOUR LARGEST TAX EXPENDITURES FISCAL YEARS 1993 TO 1998

Reported tax expenditures of \$4.1 billion for fiscal year 1998 were \$993 million or 32.4% greater than the \$3.1 billion reported for fiscal year 1993, the first year the Tax Expenditure Report was issued. The change in the value of reported tax expenditures reflects improved reporting, new expenditures, as well as the impact of inflation and economic growth. Of

only \$14 million or 4.6% from \$306 million to \$320 million. The value of this tax expenditure will start to increase as the standard deduction increases to \$1,300 for the 1998 tax year, \$1,650 for the 1999 tax year, and \$2,000 thereafter. The Department of Revenue estimates the cost of this tax expenditure will jump to \$416 million in fiscal year 1999.

Four Largest Tax Expenditures Fiscal Years 1993 to 1998 (Dollars in Millions)

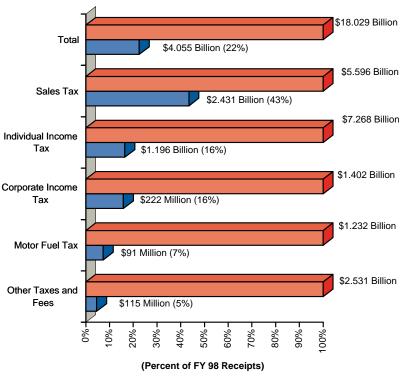

The largest tax expenditure, the reduced sales tax rate for food, drugs, and medical appliances, increased \$230 million or 34.1% from \$675 million to \$905 million reflecting inflation and increased consumer purchases of exempted items. The other major tax expenditure from the sales tax, the exemption for sales to exempt organizations such as local governments and charities, increased \$86 million or 19.1%.

A \$4.1 BILLION IMPACT ON REPORTED TAX RECEIPTS

The \$4.1 billion in tax expenditures were applied against revenue sources that brought in a reported \$18.0 billion in fiscal 1998. This amounts to 22% of reported receipts. Of the major revenue sources, tax expenditures had the greatest impact on the sales tax followed by the individual income tax, corporate income tax, and motor fuel tax.

All other expenditures had a combined impact of \$115 million, or 5% of other receipts of \$2.5 billion. Within these sources, there were several for which tax expenditures had a substantial impact. These include - fishing licenses (\$6 million impact, total receipts of \$8 million); the public utility tax on electricity (\$41 million in tax expenditures, total receipts of \$316 million); and the underground storage tank tax (\$12 million in tax expenditures, total receipts of \$68 million).

Impact of Tax Expenditures on Tax Receipts

WHO RECEIVED TAX EXPENDITURES

Tax expenditures for individuals totaled \$2.1 billion in fiscal year 1998, while business received \$1.0 billion, charities \$540 million and other \$424 million.

Individuals received \$1.5 billion in broad-based tax expenditures, the two largest being the food and drug rate reduction and the standard exemption from the individual income tax. Expenditures for the elderly and disabled totaled \$567 million, including \$528 million for

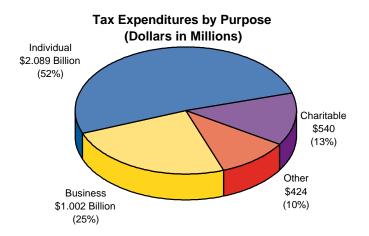

Education Funds Receipts and Tax Expenditures*

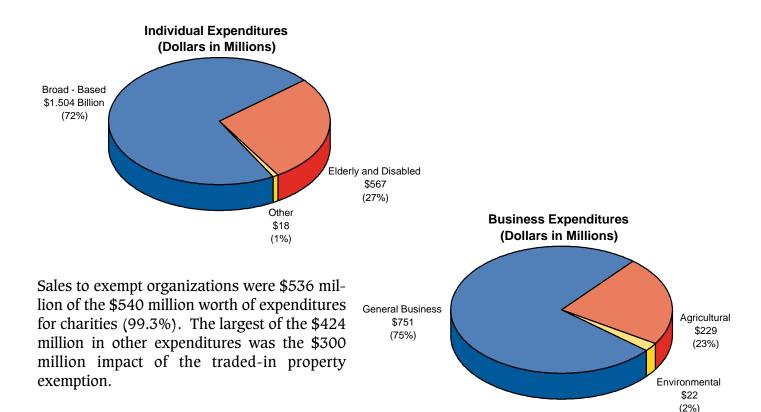

* Includes Common School, General Revenue - Common School Special Account and Education Assistance Funds

federally taxed retirement and social security subtractions.

The impact of general business expenditures was \$751 million, while agricultural expenditures were \$229 million and environmental expenditures totaled \$22 million. The manufacturing machinery exemption, net operating loss deduction, and retailers sales tax discount were the largest general business expenditures.

THE IMPACT OF TAX EXPENDITURES ON REVENUE SHARING

Normally it is difficult to measure the impact of tax expenditures on spending. One case where such a relation can be made occurs when a portion of tax revenues is automatically granted by formula to local governments.

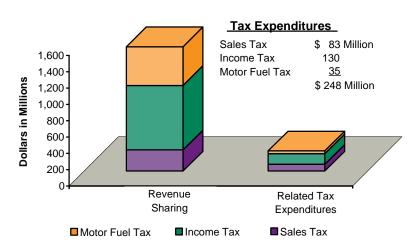

During fiscal 1998, over \$1.5 billion was distributed in income, sales, and motor fuel tax revenue sharing. Tax expenditures had an estimated \$248 million impact on these distributions.

A fixed percent of net income tax revenues are granted to counties and municipalities as state revenue sharing. Distribution is based on their shares of the State's population. The distribution is currently 1/10 of net revenues. In fiscal

1998, the Local Government Distributive Fund received \$792 million in transfers from the General Revenue Fund related to income tax receipts. Based on a 16% ratio of tax expenditures to combined income tax receipts, distributions were \$130 million less than they would have been without tax expenditures.

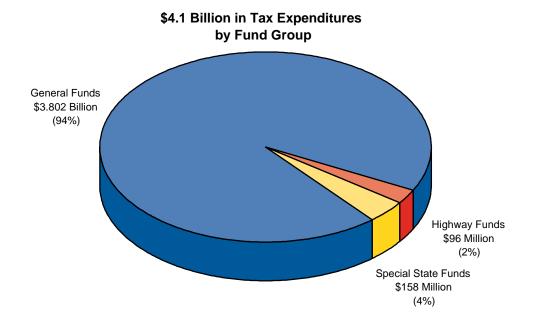

There are several programs which share sales tax revenue with local governments. The Public Transportation Fund receives General Revenue Fund transfers equal to 25% of net revenue collected from the local RTA sales tax. The Downstate Public and Metro-East Public Transportation Funds receive a General Revenue Fund transfer based on a percentage of state sales taxes paid in their districts. Finally,

Revenue Sharing and Tax Expenditures

the Illinois Tax Increment Fund receives 0.27% of state sales taxes and the Local Government Distributive Fund receives 0.4%. In fiscal 1998, these programs received \$259 million in direct receipts and General Revenue Fund transfers. Distributions were \$83 million less than they would have been without tax expenditures.

State motor fuel taxes are used for state purposes and shared with counties, municipalities, townships, and road districts. During fiscal 1998, local government funds received \$475 million in motor fuel tax revenues. Based on 7.4% ratio of tax expenditures to motor fuel tax receipts, distributions were \$35 million less than they would have been without tax expenditures.

TECHNICAL APPENDIX

Tax Incentives Included in This Report

The Comptroller's Office decided to limit required agency reporting to those tax expenditures which are:

- 1) state levied taxes accruing to the state (this excludes tax expenditures related to locally levied taxes that are collected by the state and tax expenditures for state levied taxes like the personal property replacement taxes and local share of the state sales taxes that are automatically distributed to local governments);
- 2) authorized directly by state law (tax expenditures arising from the adoption of federal income tax provisions as the starting point for state income tax computations need not be reported); and
- 3) in excess of \$1 million in Fiscal 1998 or Fiscal 1999 (however some agencies did report smaller tax expenditures and the receipting agencies were asked to list any tax expenditures for which detailed cost estimates were not provided either because the tax expenditures were less than \$1 million or were not calculable).

Limitations on Using Tax Expenditure Data

Unlike much of the other data released by the Comptroller's Office, the costs of many of the reported tax expenditures are estimates whose accuracy may be affected by the limitations of the data used to construct the estimate. Measurement of a tax expenditure may require assumptions about the tax base that are subjective and might differ if made by another analyst.

The revenue gained from eliminating a tax expenditure can vary from the figures presented in this report as elimination of a tax expenditure may lead taxpayers to change their behavior.

Further, adding the impacts of the various tax expenditures may overstate the total cost of the tax expenditures as some transactions may be exempt under multiple tax expenditures.

Items that fall outside of the Illinois tax base are not tax expenditures. For example, the Illinois sales tax is a tax on the transfer of tangible personal property for final use. In most cases, services are only taxed to the extent tangible personal property is transferred as part of the service agreement. Thus a purchase of auto repair services is only taxed on the parts used in the repairs. Not fully taxing service purchases is not a tax expenditure as services lie outside the state tax base.

State Versus Federal Law

In some cases, federal tax law serves as the basis for starting state tax computations. For example, computation of the Illinois personal income tax begins with adjusted gross income (AGI) as determined on federal tax returns. Thus some federal tax expenditures are implicitly extended to Illinois personal income taxpayers.

For this report, such indirect tax expenditures are not considered to be authorized by state law. The Illinois statutes may set AGI as the starting point for Illinois personal income tax computations, but the actual authorization of the tax expenditure is determined by federal law and can be modified by amendment of the federal law. The portion of the tax expenditure statute asking for the "citation of the legal authority for the tax expenditure, the year it was enacted, and the fiscal year in which it first took effect" is interpreted to apply only to state statutes.

However, the state can require specific federal tax expenditures to be added back to the state tax base. An example is the municipal bond interest deductions which are added back to taxable income when computing the Illinois personal income tax base.

Tax expenditures arising for federal constitutional reasons are also excluded from this report. An example would be items exempt from state taxation due to the Commerce Clause of the federal Constitution.

Alternative Taxes

In some cases transactions or income are exempted from one state tax because they are subject to another state tax. For example, transactions subject to the state sales tax are exempt from the state use tax. Exemptions included in the statutes to prevent double taxation are not considered tax expenditures for purposes of this report. Similarly, credits for taxes paid to other states prevent double taxation and are not tax expenditures.

• For Further Information

Agency tax expenditure submissions are provided to the Comptroller using the Comptroller's Automated Tax Expenditure Reporting System. Copies of these detailed agency responses will be made available on the at the Comptroller's web address http://www.comptroller.state.il.us or can be obtained by contacting Loren Iglarsh (217) 782-7921.
